Artificial Intelligence for Transparent Investing

Mirocana is a complex, self-reinforcing system based on deep-learning neural nets and other modern machine learning models that predicts stock, currency and crypto-currency markets.

What problem does Mirocana solve?

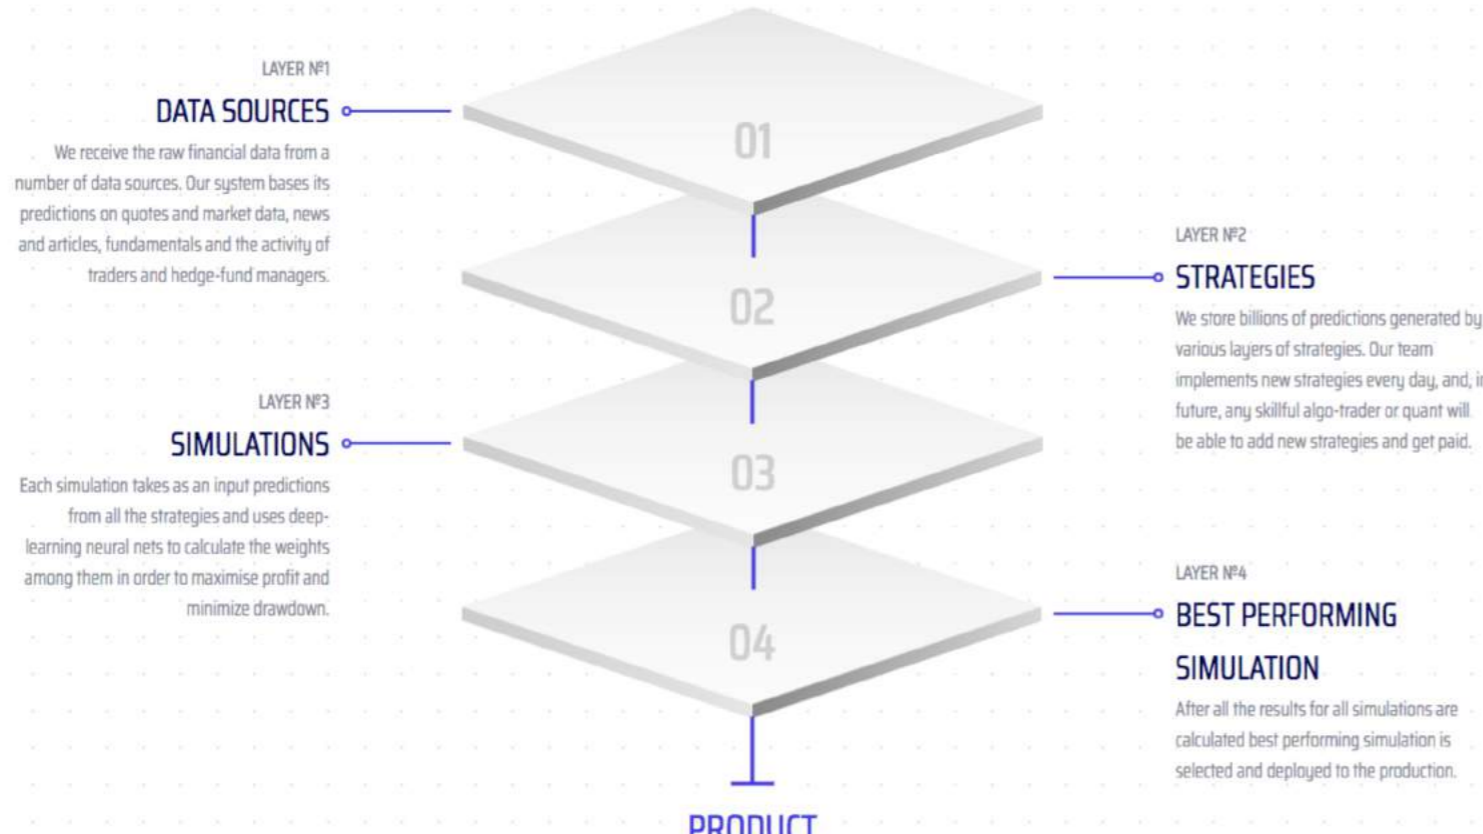

- The majority of firms are limited by using third-party software to write robo-advisors and to backtest them. Automated asset management is typically done by one strategy that may be huge but implemented in a hard and static logic of if ... then ...
- Unable to re-adjust and start to lose when the market behavior is changed.
- Typically based on a single data source.
- Money management logic is typically hard-coded and does not depend on past performance of the algorithm

We solve a problem of predicting the markets as a **data science problem** by collecting, processing, storing and analyzing **huge volumes of financial data** that we receive from **40+ data sources**.

Mirocana analyzes activity of thousands of professional traders and is able to achieve a cumulative effect.

How does Mirocana work?

HOW DATA TURNS INTO INVESTMENT PRODUCT

Our investment products are based exclusively on best-performing simulations. Moreover, they are connected to a monitoring unit that is able to stop all activity and turn the assets into cash in case of an accident or emergency situation.

How is Mirocana beneficial for token-holders?

If you purchase enough MIRO tokens you will get access to our three market-specific investment products that use our predictive engine to help you grow your wealth.

STOCK MARKET

Mirocana system is able to manage your Interactive Brokers account using the predictions for over 400 companies that are traded on NYSE and NASDAQ stock exchanges. Access to this product will be only granted to TOP200 of the token-holders at the end of Token Sale. After the Token Sale to get access to this product it will be required to have at least \$5 ml. under the management of the system.

[Learn more >](#)

CURRENCY MARKET

Mirocana system is able to manage your OANDA account using the predictions for 125 currency pairs available with OANDA broker. To get access to this product it is required to have at least 10,000 MIRO tokens on your Mirocana Account which is equivalent of 10 ETH (Token Sale price: 1 MIRO = 0,001 ETH). After the Token Sale it will be required to have at least 30,000 MIRO tokens on the balance to get access to this product.

[Learn more >](#)

CRYPTO-CURRENCY MARKET

Mirocana system is able to manage your Poloniex account using the predictions for 90 crypto-currency pairs available on Poloniex exchange. To get access to this product it is required to have at least 5,000 MIRO tokens on your Mirocana Account which is equivalent to 5 ETH (Token Sale price: 1 MIRO = 0,001 ETH). After the Token Sale, it will be required to have at least 15,000 MIRO tokens on the balance to get access to this product.

Executive Team

GEORGE PETROV
Founder and CEO

George founded a company in March of 2015. Previously he was managing information security company, developing high-load backend infrastructure for mobile games and he was working in several IT-companies on leading positions as developer or data scientist.

EUGENE ULYANOV
Co-founder and COO

Eugene has a Ph.D. in Law. In the past, he was a founder of a marketing agency and several start-ups together with Embria Ventures. Responsible for external communications, integration of people and processes.

SERGEY POPOV
C++ Core Developer

Sergey is an experienced C++ high-load ecosystems. He was involved in the development of OpenGL ES for mobile platforms and engines development in C++. He is responsible for the low-level logic of Mirocana core functionality.

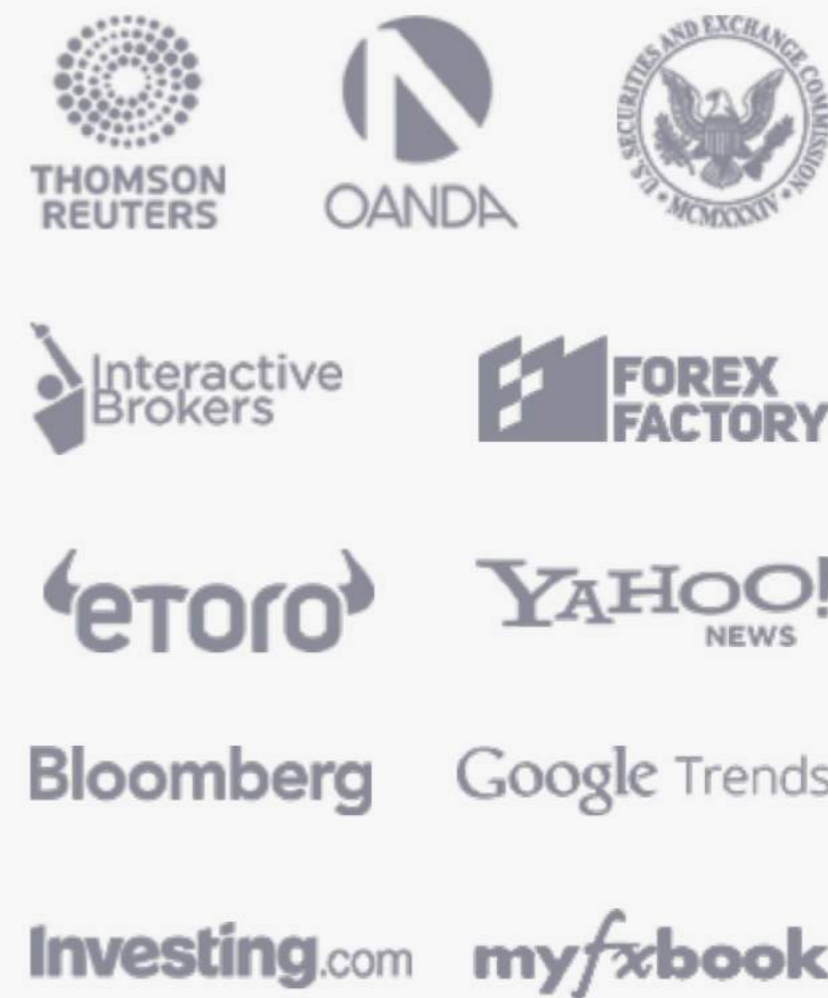

Legal Information

We have two-entity structure, the Canadian company is the main intellectual property owner in the group, hence the Estonian company provides the services to the clients using the technology of its Canadian affiliate. Estonian company is the one issuing tokens.

Canadian Company

Mirocana Company 9367-1840 Québec inc., a private limited company incorporated in the province of Quebec in Canada having its registered office situate at 587 CH. Pionniers La Minerve, Québec, Canada, J0T1S0.

Data Vendors

What's the big picture?

We set **"increasing accuracy of predictions"** as the main goal of the company. We will add new data sources, strategies, simulations and other features that will positively affect our investment performance.

By August of 2019 we will have

- Increased accuracy of system's predictions
- A platform as a new data source in the system
- ±7000 strategies in the system and ±150 billion predictions.
